

Chemical Injection Utilities (CIU) are a part of the ICR Group of companies and supply chemical injection systems and associated services globally.

With over 25 years' experience, CIU strive to surpass our customers' expectations by providing a personalised, bespoke and cost effective consultancy service for the provision of chemical injection equipment and associated services.

Our key service lines include;

- **Rental of Chemical Injection Skids and Packages**
- **Design, Build and Commissioning of Permanent Chemical Injection Systems and Packages**
- **Maintenance, Servicing and Supply of Spares**
- **Chemical Injection Consultancy and Technical Support**
- **Chemical Injection System Reviews and Site Surveys**

CIU offer rental systems during the interim period whilst any project equipment is being engineered, commissioned or maintained – ensuring start-up deadlines are met and continued chemical injection. Ultimately, CIU manage all aspects of chemical injection systems so you don't have to.

Engineered Chemical Injection Solutions

The injection of chemicals in the Oil and Gas Industry is a crucial process allowing fluid treatment, enhanced production and increased life of the operator's facilities.

Chemical Injection Utilities (CIU) deliver a unique service offering both electrical and pneumatic chemical injection systems which reflects individual project specifications.

Fully automated cost effective chemical injection systems with real time chemical monitoring facilities can be engineered by CIU. This includes:

- Front End Design Consultancy
- Comprehensive Engineering
- Fabrication and Testing
- Installation and Commissioning
- Maintenance and Upgrades

CIU have the ability to provide a fully inclusive service from inception to maintenance – ultimately ensuring any equipment supplied will be fit for purpose and as future proof as possible within the requirements of the project.

FRONT END DESIGN CONSULTANCY

CIU have an established engineering team offering expertise to design chemical injection systems that support any new projects, upgrades or modifications.

CIU are independent from product manufacturers and are experts in both electric and pneumatic systems. CIU have capabilities to provide solutions that are custom built to the client's specific needs whilst offering guaranteed cost savings and short lead times.

COMPREHENSIVE ENGINEERING

CIU's proactive approach ensures we work closely with the customer every step of the way and provide the chemical injection expertise required for any projects, upgrades or modifications. CIU also offer field experts to initially survey and audit customer sites as part of the design and recommendation process. This guarantees all avenues have been considered prior to fabrication and delivery - ultimately preventing delays and minimising cost.

FABRICATION AND TESTING

With over 25 years' experience in chemical injection services, extensive manufacturing and testing facilities, CIU offer the technical and operational capacity to handle large fabrication builds.

CIU have a fleet of 500 plus temporary skid systems that can be used for intermediate purposes should there be any project delays or design changes - ensuring any associated project downtime can be minimised

INSTALLATION AND COMMISSIONING

Highly skilled engineers and technicians are available to carry out all aspects of the installation and commissioning of chemical injection systems - including hook up of equipment, calibrating equipment to agreed injection rates and training of onsite personnel if required.

MAINTENANCE AND UPGRADES

To optimise the lifespan of equipment, and minimise downtime of chemical injection, it is imperative that regular maintenance is carried out in line with the manufacturers recommended guidelines. CIU can supply equipment spares in addition to specialist offshore personnel to carry out any necessary maintenance on systems. If preferred, equipment can be returned to CIU for overhaul and a rental injection unit can be provided to minimise downtime if required.

Why choose CIU?

- Proactive customer interface
- Independent supplier
- Air and electric drive solutions
- Inhouse engineers and chemical injection expertise
- Site surveys and audits of customer facilities
- Cost benefits and reduced lead times
- Temporary equipment available for project backup
- Global presence and solutions
